

SR-710 Tunnel Technical Study Exploration Program Notice

MONDAY, MARCH 16, 2009

In June 2008, Caltrans and Metro began the SR-710 Tunnel Technical Study to examine all reasonable and practical alternatives for extending the SR-710 using a tunnel. This geotechnical study will involve research, exploration and technical analysis of the soil and sub-surface conditions found while tunneling at depths of more than 250 feet.

more than 250 feet.	
What type of testing will be	Testing of local soils will be studied by drilling (boring) a six- inch wide hole through the soil surface. Information about the various types of soil, such as rock or sand, will be
performed?	gathered.
Where is the	The testing site is located on 700 Pullman St. (Cul-de-sac east of Collis Ave.) in the <u>City</u>
testing site	of Los Angeles.
located?
